DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-77 drawn to nucleoside compounds/compositions and oligonucleotides thereof, classified in class 536, subclass 27.21+.
 - II. Claims 78-102, drawn to a probe/primer and antisense method, classified in class 536, subclass 24.3 and class 536, subclass 24.5.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as Groups possessing a nucleoside compound wherein the divergent utility or method of use of the compounds in Group II distinguishes the search from that of Group I. The search required for utility as a probe or for antisense methods is not required for the compound and composition claims which are narrower in scope and have a divergent classification.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. The examiner notes that a search and examination of the two inventions given the diverging subject matter of probe and antisense technology would indeed impose an undue burden on the examiner of record.
5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 1623

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
